

## Engineered For Safety !

### Application Designed: Pentalift Triple Scissor Lift Table

A recreation facility required access to an upper level for the transfer of assorted products. The Pentalift Triple Scissor Lift Table shown features a fully enclosed, 4 sided, gated, 72" high safety mesh enclosure. Product is loaded onto the platform in the lowered position, gates closed. The platform raises 15' to the upper level, the gates are opened and the product is removed. The application requirements stipulated a platform size of 84" wide, 108" long with a lifting capacity of 4,000 lbs. To provide the specified lift speed the lift table was supplied with a 575/3/60 3 HP powerunit. To further ensure safe operation the gate assemblies are "interlocked" to the control circuit. Unless both gates are fully closed and locked, the unit will not raise or lower.
