

Loading Dock Safety!

Pentalift Service Department

Increase safety, reduce downtime and lower costs by utilizing the highest level of service expertise

Pentalift is recognized as an industry leader in the design, manufacture and service of all types of loading dock equipment. Pentalift's service department repairs, replaces and services all makes and types of loading dock equipment. As an original equipment manufacturer, our knowledge gives us a unique insight into factors related to loading dock equipment maintenance and service. Our service technicians can draw on information and training from our engineering and manufacturing staff to address problems thoroughly and more efficiently. Our service technicians are factory trained. They are dispatched in service vehicles that are fully equipped and capable of addressing the most complicated loading dock equipment problems. Service vehicles carry a large selection of loading dock equipment repair components to facilitate repair of equipment on the spot without having to get the parts and return. Pentalift service departments area of coverage is greater Toronto and South Central Ontario. Twenty four hour service line promises the minimum interruption of your loading process.

Products commonly maintained, repaired, or replaced

- Mechanical dock levelers
- Hydraulic dock levelers
- Vehicle restraints
- Overhead doors
- Dock seals and shelters
- Dock lifts
- Hydraulic lift tables
- Dock bumpers

Other services provided

- On-site dock welding services
- Loading dock equipment re-location
- Dock leveler hydraulic conversions
- Deck and lip replacement / retrofits
- Integrated dock traffic light systems
- Dock loading lights
- Wheel chocks and bumpers
- Safety and maintenance Inspections

Planned Maintenance

A Pentalift Planned Maintenance program is tailored to suit each individual application requirements. Considerations include the number of trucks serviced per shift, number of shifts per day, and servicing can be scheduled to minimize disruption during peak shipping schedules. Performed by factory trained fully qualified technicians a planned maintenance program will prolong the efficient operations at your loading dock area and prove to be cost effective.

Hydraulic Conversion Kit

Available to upgrade the majority of mechanical or pneumatic powered dock levelers to match the performance, efficiency and reliability of fully hydraulic operation. A hydraulic conversion kit improves the ergonomics at the loading dock with ease of operation and increases the safety at the loading dock. Cost effective and quick turn around times are 2 additional benefits achieved by converting structurally sound dock levelers to fully hydraulic operation.

Dock Seal/Shelter Repair/Replacement

Damaged dock seals/shelters are often neglected when in fact a properly designed seal at the dock door increases energy efficiency and increases safety at the loading dock by minimizing rain; snow etc from contacting the loading dock equipment causing slippery conditions. As energy costs continue to escalate one of the quickest ways to save money daily is to identify and correct any problem related to the dock seal/shelter. An efficient dock seal/shelter also minimizes the potential for damage to product and dust or vermin entry.

Weatherseal

Loading dock weatherseal improve energy savings at the loading dock by minimizing the transfer of heated/cooled air from the exterior to the interior of the building. Weatherseal also minimizes exterior contaminants such as snow, dust and leaves etc from blowing up onto the loading dock area and reduces the labour costs of clean up. Available as a neoprene seal or available as a brush style seal installing new weatherseal quickly pays for itself.
