## **Engineered For Safety !**

### **Application Designed:** Powered portable 10,000 lb capacity lift table

A leading provider of injection molded plastic parts looked into suppliers to replace their existing custom hydraulic lift table. After an evaluation including a thorough product comparison was completed the customer awarded the order to Pentalift. The lift is designed to operate quickly on a 150 ft long track moving finished product from the packaging process to a range of distribution locations. The lift features a hydraulic power drive system, a 10,000 lb capacity lift table and a platform installed 3,000 lb capacity lift table complete with a roller conveyor platform. All operations of this design are conducted from a platform installed control station. The control system permits simultaneous operation of the main drive system and both of the lift systems. The main drive system uses a 20 hp powerunit with soft shift valving to ensure smooth operation while both accelerating and decelerating.
