

PENTALIFT EQUIPMENT CORPORATION

Engineered For Safety

Application Designed: 29 Pentalift Hydraulic Dock Levelers, HFR32 Vehicle Restraints and PS-400S Truck Shelters at a Wood Fireplace Manufacturing Facility

When an innovative designer and manufacturer of wood stoves, gas grills, and fireplaces realized their continued market success and expanding product line required additional manufacturing facilities, including new loading dock positions, they began searching for the right product.

Since the first wood stove rolled off their production line in the mid-seventies, their commitment was to be distinctive and successful in everything they do. That motto would extend itself to envelope every aspect of their business, and the safety and efficiency of their manufacturing and logistics team would not be overlooked.

Pentalift met every safety concern the company had, and after an evaluation process, they decided to proceed with Pentalift loading dock equipment. The Project included several HD hydraulic dock levelers, PS400S truck shelters with galvanized steel frames, and HFR 32 hydraulic vehicle restraints.
