

PENTALIFT EQUIPMENT CORPORATION

Engineered For Safety

Application Designed: 122 HD6835 hydraulic dock levelers, 122 model PS200 dock seals.

A major property developer contacted Pentalift with reference to a multi-tenant distribution center to be built on a strategically located site. The site was chosen for its easy access to four major highways servicing customers north, south, east and west.

Pentalift was chosen as the loading dock equipment supplier for this prestigious project based on our quality of design, competitive pricing and our past performance meeting rigid construction schedules.

The equipment specified for this project was Pentalift model HD6835 hydraulic dock levelers equipped with 3 phase power units, 18" long lip assemblies, brush weatherseal, laminated dock bumpers and PS200 model of dock seals. Based on the overhead door size this model of dock seal was selected to effectively seal the trucks to the building thereby minimizing any energy loss during the loading process.
