### **Application Designed: Pentalift Triple Scissor Lift Table**

An international company that specializes in packaging products contacted Pentalift to discuss their application requirements. Working within limited space restrictions the quality control personnel needed access to an observation point. Reviewing the site conditions it was decided that a Pentalift model 22TSL44683 custom industrial scissor lift would meet all of the application requirements. The lift designed has a platform size 44" wide, 68" long, a checker steel platform, and 72" high guard rails with mesh enclosure. The access gates are interlocked; the lift will not raise or lower unless both of the gate locking bolts are secured in place. The operator controls are installed on the lift table platform and it is raised and lowered by an external 5 hp power unit.
