

**PENTALIFT EQUIPMENT CORPORATION**

**Engineered For Safety**

**Application Designed:** Pentalift Hydraulic Dock Levelers, RVR32 Vehicle Restraints and PS-200 Dock Seals at a Plastics Manufacturing Facility

A large international manufacturer of plastics components selected Pentalift dock equipment for a major manufacturing facility. The equipment selected was 64 hydraulic dock levelers, 64 RVR32 vehicle restraints and 64 Model PS-200 dock seals. The plastics manufacturer determined that Pentalift was able to offer them a better design and value than other potential dock equipment manufacturers. The function of the equipment was further enhanced through the use of a master control panel. The master panel controls the operation of the dock leveler and the vehicle restraint. The operation is interlocked to further facilitate safety. Safety, value and performance were deciding factors for this plastics manufacturer. The RVR32 vehicle restraint was selected to prevent accidents associated with fork trucks rolling off the dock when a trailer departs on an unexpected basis.
