### **Application Designed: Portable Lift Table with Rotating Top**

A manufacturer of Aerospace composites required an application designed lift to suit a unique application in their manufacturing process. The 1,000 lb capacity lift table had to be fully portable, include a rotating top with a section of conveyor to facilitate product placement and also feature a comparatively low closed height. To achieve the low height the design incorporated a low profile portability package; the lift table frame is slung low with outboard casters to achieve this prerequisite. Phenolic casters were chosen for ease of mobility. The on board DC powerunit and charging station provided complete mobility anywhere within the facility.
