Engineered For Safety

Application Designed: Stainless Steel Deck Lift for Art Museum

A well know art museum in the North East United States required 3 dock lifts for loading and unloading the rare and valuable pieces of art housed and exhibited in their facility. There are 2 sizes of dock lifts supplied; the dock lift shown is 8' wide, 12' long with a rated capacity of 10,000 lbs. Due to the sanitary requirements for moving the artifacts stainless steel was the most suitable material for the construction of the deck assembly. By applying its knowledge and experience in designing and applying custom dock lifts Pentalift provided a solution to address the unique requirements of the application.
