Engineered For Safety

Application Designed: Triple Scissor Lift Table with Powered Rotating Top for Tire Manufacturing

One of the largest manufacturers of off road tires in the world, required an adjustable height work platform to assist in the inspection of the tires inner liner.

After reviewing the application criteria Pentalift designed and manufactured a multistage lift table. The design allows the inspector to more efficiently examine the inner liner prior to certifying the tire for use, for ease of operator inspection the lift table is also equipped with a powered rotating top.

The specifications of the lift table included a 48” diameter powered rotating top complete with a slew ring bearing, 1,000 lb. lifting capacity and an 81” raised height.
