

PENTALIFT EQUIPMENT CORPORATION

Engineered For Safety !

Application Designed: Triple Scissor Hydraulic Lift Table For Helicopter Assembly

During the final assembly of Helicopters, this manufacturer's course of action is to first "balance" the helicopter blades. The helicopter blades, typically a group of 3, are raised, rotated into position and installed on a fixed helicopter engine that operates in an outdoor setting. The engine is turned on and the rotating helicopter blades are balanced prior to being assembled on the helicopter body. The 6000 lb capacity Pentalift Triple Scissor Lift Table was engineered and manufactured specific to both the load application and the outdoors, year round operating environment to ensure safe, extended operation.
