

Accordion Bellows/Accordion Lift Table Skirts/Lift Table Bellows

Pentalift accordion bellows are available to suit many brands and models of lift tables. Accordion bellows are designed to minimize debris entry under the lift table, keeping the debris out reduces the maintenance and housekeeping tasks at the work station. The potential for damage to the lift table and the associated downtime is significantly reduced if debris is prevented from coming in contact with the moving scissor assemblies, leg rollers and power unit.

All Pentalift accordion lift table skirts are manufactured with a full perimeter mesh vent. As the scissor lift is lowered the air inside the bellows is exhausted through the mesh vent which assists in preventing distortion of the accordion bellows. The individual pleats are computer cut to length to assure conformity of fit, sewn together in an industrial sewing process and all corners are heat sealed. The accordion bellow is supplied with metal stiffening rods and a top perimeter mounting plate to affix to the lift table skirting to the lift table platform

In addition to manufacturing lift table bellows for Pentalift products lift table bellows are available from our Parts Department to suit many other brands of lift tables. The accordion bellow kit consists of the bellows, top perimeter mounting plate and installation instructions.
